

ASHTON BENTLEY

Meeting spaces simplified.

FLEXIBLE MEETING SPACE TECHNOLOGY

Just walk in and work

What we do

Ashton Bentley provides advanced and integrated meeting space technology that is simple to install, use and manage.

Why we do it

Everybody needs technology to work and to know it isn't going to let them down or be too complicated to use. This forms the foundation of our system.

How we do it

Our meeting space systems are supplied complete. Installed in hours so anyone can just walk in and work.

We manufacture a range of complete 'out of the box' meeting space systems that provides professional audio-visual technology and user-friendly control, integrated into tables designed for purpose.

Designed to significantly reduce the total cost of ownership and to increase the effectiveness of communication; each Ashton Bentley system simplifies and standardises both the technology and the user experience.

Our systems reduce the time taken to specify, purchase, install and be ready to work. No more time-consuming multi-vendor installations.

A system that replaces a room of equipment and expensive design and installation services.

Defining the meeting space

The meeting space system explained

There are three main elements of an Ashton Bentley system:

The intelligent display system

Display(s), mount, audio and the central processor (we call it the **abox**).

The abox replaces the usual rack of equipment condensed into a single 1.5ru box. Providing video/audio signal manipulation and routing, power management, network interface, system control and monitoring.

The table

With integrated hidden technology for connectivity and user operation. Designed for both standard and video meetings where everyone is on camera.

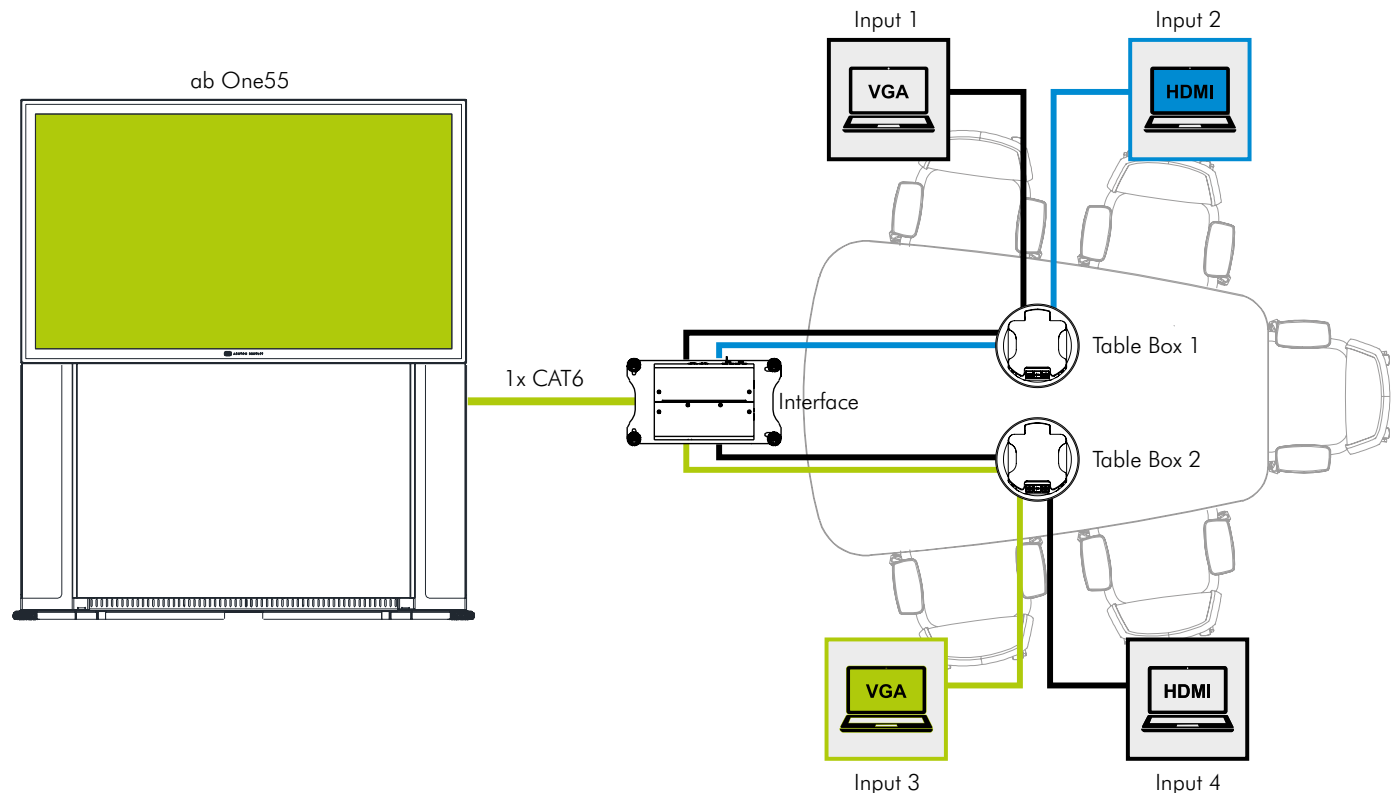

Connectivity at the table is via our **interface** connection hub into which multiple laptops, mics, USB, touch panels and IP phones can be connected.

The user control is simple and intuitive.

Note: Our table technology can be fitted into your table if preferred.

The interconnection between the intelligent display and the table

Single standard flat Cat6 for simple installation.

Flexible to suit your needs

VIDEOCONFERENCING

Ready to accept all major platforms

Technology simplified

Significantly reducing the number of components in our system means that configuration, shipping, installation and maintenance is straightforward.

Supplied with all cables and connectors required and pictorial assembly instructions.

In fact, a complete room (everything including a table) can be installed and ready to work in hours, not days or weeks. Want to relocate a system? Simple and quick with no room remediation.

Lowering the total cost of ownership.

Fit out more rooms for your budget.

Vs.

Simple to use and manage

Semi-automated operation:

Connect your laptop via our captive seeMe cable and the system automatically turns on and your image is displayed and scaled to match the display. Disconnect and the system turns off.

More than one laptop input?

No problem. Connect all laptops via the seeMe cables and the last seeMe button pressed is the laptop displayed.

Using videoconferencing?

Our system can be set to auto-answer or user answer. Buttons in the table box provide auxiliary input selection and volume control.

All Ashton Bentley systems can be remotely managed, monitored and controlled by abSee, our cloud based management platform.

Frequently Asked Questions

Q. Is this high level of technical integration and flexibility expensive?

A. Not at all. Comparing a typical multi-vendor system integrated and installed, Ashton Bentley meeting room systems cost less. Customers get more rooms equipped for their budget.

Q. Will I be one of the first users to try out this revolutionary approach to meeting space technology?

A. Absolutely not. We are on our 3rd generation of systems and many multinational businesses use our products daily. As Mike Blackman, Managing Director of Integrated Systems Europe told us after installing our systems at his Munich HQ - *"Thank you to the Ashton Bentley team for taking ISE out of the collaboration dark ages"*.

Q. How easy is it to use?

A. Very. No complex user interfaces with remotes or touch panels, the semi-automated and intuitive control removes any techno-fear. This means less down time in meetings.

Q. With no installed room speakers how good is the audio?

A. By using professional studio quality active speakers we achieve 'room filling' audio with great clarity for voice and program.

Q. Can I customise the systems?

A. Whilst we promote standardisation for better scalability, user familiarisation and cost control, we can offer custom colours and table designs. Plus technical changes for special applications. Talk to our technical team and we are sure we can help you.

Q. Do I need to purchase anything else before the system will work?

A. No. Every system is supplied ready to work as a presentation system out of the box. If you want to extend the system for video conferencing just add a codec, microphone and camera.

On-site Demonstration

To arrange a meeting for an onsite demonstration call us on **+44 (0)207 100 1200**
