

LinX Components

The BX and UX.

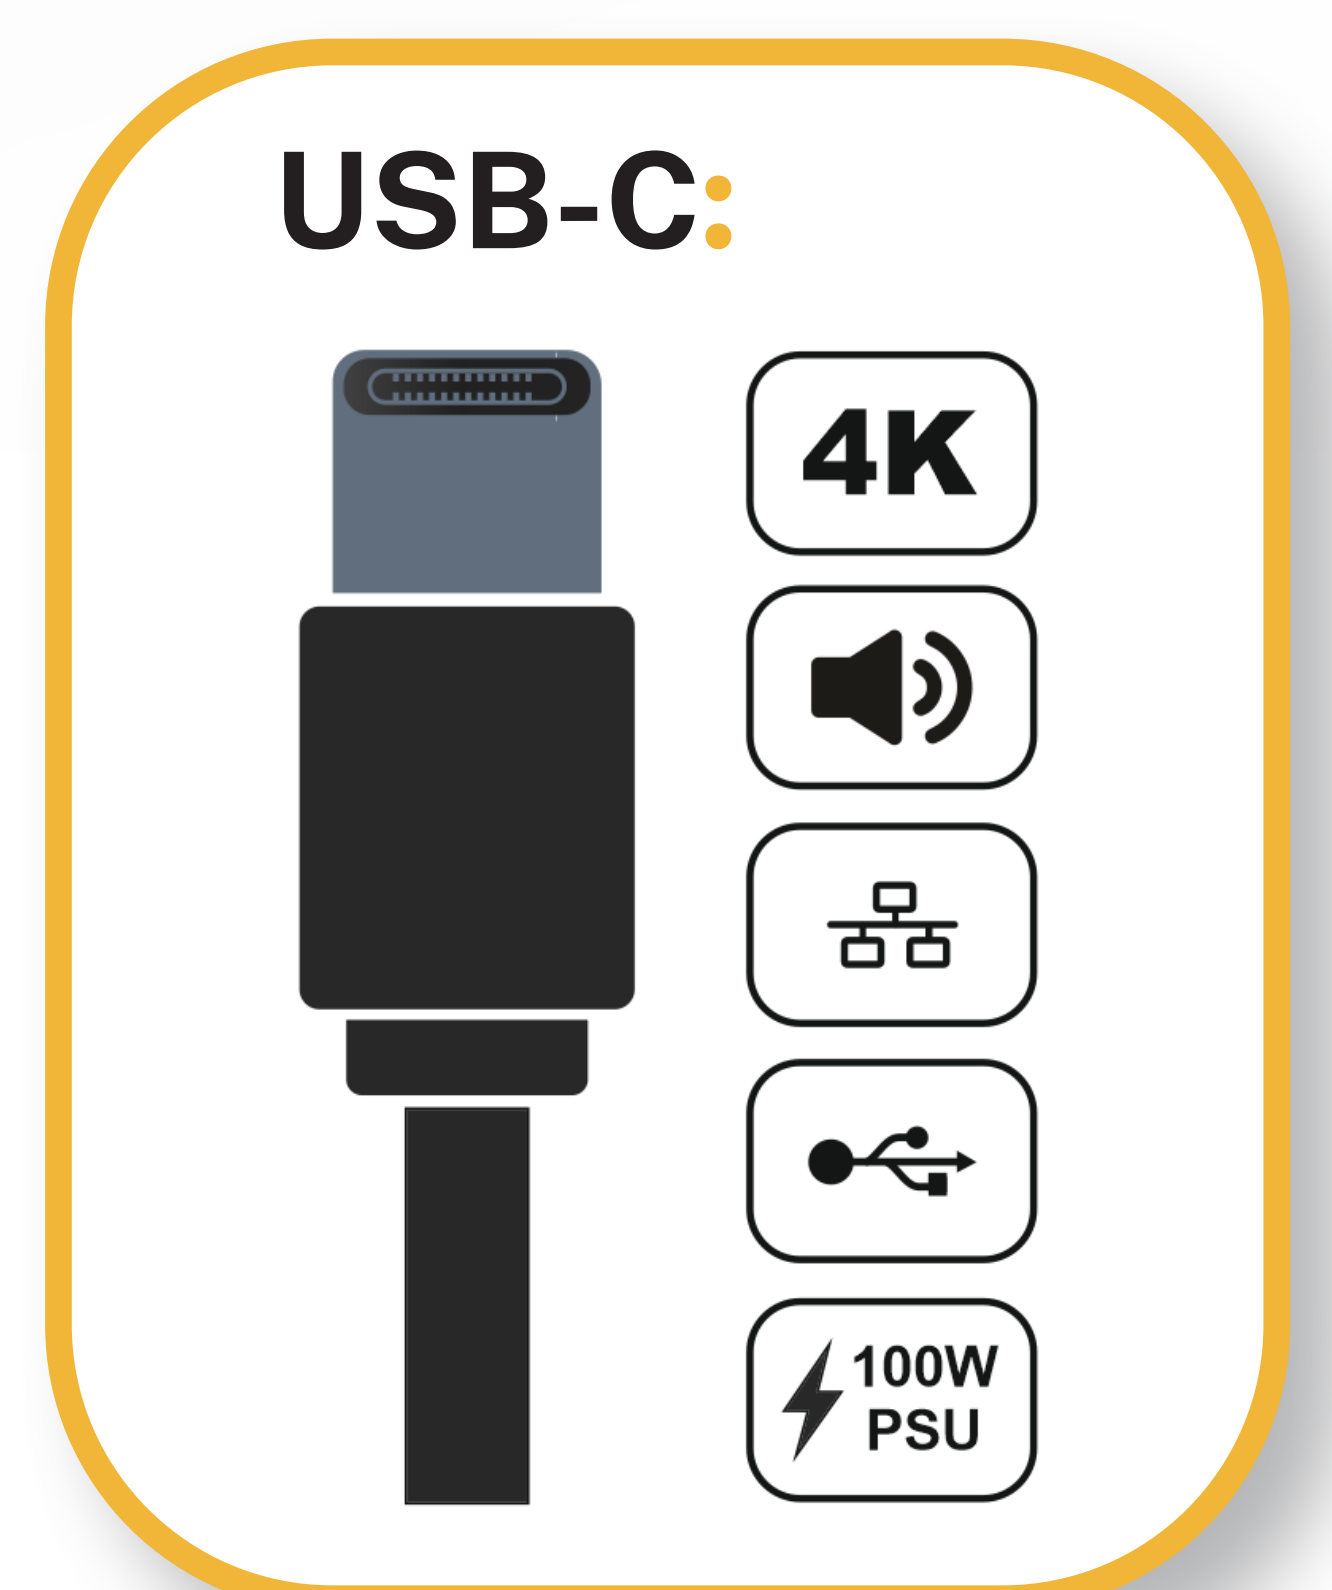

The BX.

Breakout Box

The Ashton Bentley BX replaces proprietary USB-C docks.

Ready to mount under a table, or wherever required.

Including a 2.5m USB-C device cable, with locking connector to prevent inadvertent disconnection from the BX.

Add the optional Ashton Bentley BX power supply and the 2.5m USB-C cable provides up to 100w charging to any connected device.

The UX.

Smart Switch

Intelligent device used to switch USB peripherals between a room PC/NUC and a laptop.

Designed to partner the Ashton Bentley LinX Interconnect Kit: DX Room Hub + TX Table Hub

Two modes of operation:

Control.

The DX Room Hub (in the LinX Interconnect Kit) switches the USB peripherals between Room PC/NUC and laptop. In this mode the UX is powered from the DX

Standalone.

When a laptop is detected the USB peripherals are automatically switched from Room PC/NUC to the laptop.

When the laptop is disconnected, the peripherals switch back.

In this mode the UX requires the optional PSU.
